a TT vs dense exact likelihood
slow (Richardson)
medium (Richardson)
fast (Richardson)
plain step h
Kaggle d=4, eps=1e-06
Kaggle d=4, eps=1e-07
|logL(TT) − logL(dense)|
dense state count $d^{k_{max}}$
b self-estimate vs actual (eps=1e-8)
slow
medium
fast
3×
1×
actual |error| (Richardson value)
internal error estimate (step + truncation)
